Vinyl Repair Products

Vinylhyde Repair Compound
Part# V100-4 , V100-16 (4 ounce pictured)

For professional use only. Use with heat gun or iron for repair of automotive seats, headliners, and door panels. Also industrial and marine-type vinyl.

Vinylhyde is a heat cured compound and is the most important product used in heat type repairs. Vinylhyde can be heat grained by using a grain pad to achieve the desired grain after completing the repair. Non Sandable.

Vinylhyde Thinner
Part# T12-2

2 ounces of thinner. Use to thin out V100 Vinylhyde or VSS, Super Strength Vinylhyde.

Super Strength Vinylhyde
Part# VSS-4, VSS-16

For professional use only. Fill hole partially with compound. Heat until compound smokes and gets shiny. Repeat until filled thoroughly. Grain with grain pad. Cool with chill bar. May be sanded to blend on leather repairs when cool. Strong, exceptional quality.

Barrier Coat
Part# BC-6, BC-32

Use after graining but before re-coloring repair area. Fitzgerald's Barrier Coat is specially formulated to add strength to the repair and help hide minor imperfections in the new grain pattern. Will also knock back any shininess. Allow 1 minute for the barrier coat to dry.

LEATHER REPAIR COMPOUND
Part# LRC-4

Low heat cure heat sensitive vinyl & leather. Great for door panels, too! Great adhesion and flexibility. Grain with a pad or spray on texture. White.

Vinyl Leather Cleaner, Z-7 Formulation

Part# VLC-G, VLC-P

Cleans & Protects Vinyl. Simply apply directly on surface, allow to set for a few seconds, and wipe clean with plain water. Can be used on most surfaces. NOT for FABRIC or SUEDE. Always test cleaners in a small, hidden area before applying to entire area.
